

# OneWeb

Global space-based connectivity

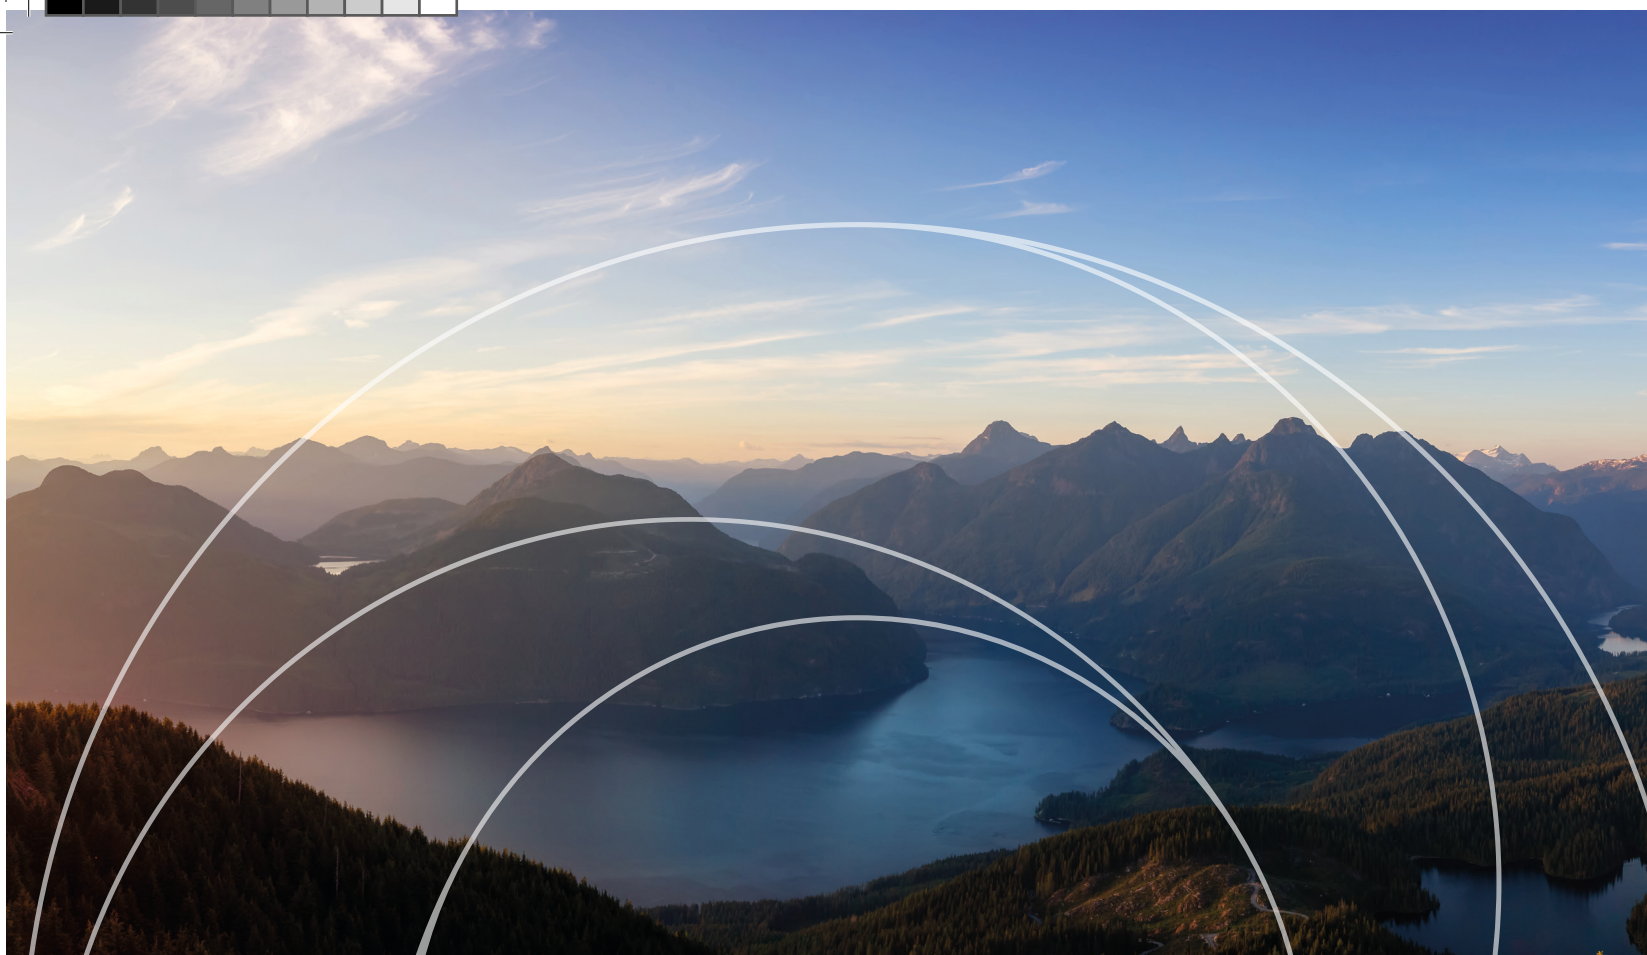

## Fiber-like connectivity everywhere

Now you can connect your enterprise to the world.

[oneweb.net](http://oneweb.net)

Even the most remote, hard-to-reach enterprise organizations rely on connectivity to operate effectively, communicate with partners and suppliers, and serve customers.

## Connect with ease

### Intelligent global connectivity

Rapidly deploy high-speed connectivity to off-net and underserved sites, adding increased capacity, availability, and performance to existing solutions with ease.

#### Advanced connectivity management

- Flexible, scalable site connectivity options: IPVPN, Business Access, and IP Access.
- Integrate into your existing product portfolios.
- Sell as a primary connection for off-net or underserved sites; a hybrid solution to increase capacity, availability, or lower latency, or; a back-up solution for resilience and business continuity.

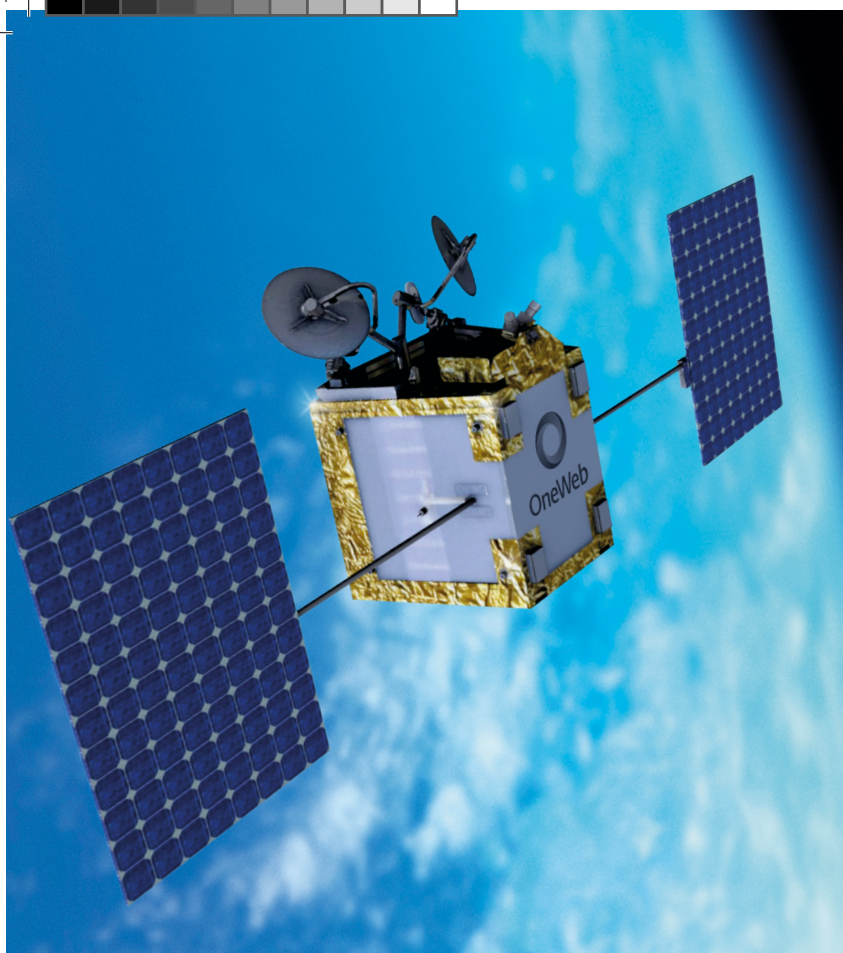

#### Many customer use cases

- Cellular backhaul, business continuity, cloud migrations, critical communications, community Wi-Fi.
- Supports all cloud, video collaboration, voice, and latency sensitive applications.

#### Multi-network solutions

- Easy integration with existing and hybrid networks.

## Connect with confidence

### New satellite connectivity solutions

OneWeb is a resilient, secure, low Earth orbit (LEO) network with priority spectrum rights to deliver high-speed, low-latency, and high-throughput connectivity everywhere.

#### Fiber-like performance

- Includes approx 70ms latency from User Terminal to Point of Presence enabling support of real-time applications and cloud architectures.
- Download speeds up to 195Mbps.
- Always connected, resilient, and secure.

#### Seamless coverage

- No more barriers to access and high-speed connectivity in remote locations.

#### Easy deployment

- Quick country-wide deployment.
- Simple rooftop hardware installation.
- Activation, service plan updates, moves, and deactivations managed with ease online.

#### Innovative technology

- Superior LEO satellite comms.
- Internationally recognized standards in security.
- Network sites around the world.

## Connect with more

### Connectivity designed for enterprise everywhere

Manage, flex, and scale OneWeb connectivity with products powered by our LEO satellite communications network.

Our coverage and services support the digital transformation of every type of communications, enterprise, and community organization, giving high-speed access to digital information, productivity tools and cloud services.

#### Transformational benefits

- New cost transformations.
- Operational efficiencies.
- Growth opportunities.
- Competitive advantages.
- Social, education, and financial inclusion.
- Safer, more sustainable development.

## Connect with purpose

### Global community and sustainability programs

Seeking opportunities to use our technology for positive change by enabling programs and innovations in sustainability through new connectivity.

#### Learning and education

Helping schools and communities access digital information, encouraging more children to learn STEM subjects.

#### OneEarth

Using our technology for positive change by enabling programs and innovations in sustainability through new connectivity.

#### Responsible Space

Space is a global, shared, natural resource. It is up to all of us to protect it. OneWeb is committed to responsible design, development, and operations across the business.

#### NGOs & brand partners

Working collaboratively with our partners to deliver the promise of ubiquitous connectivity and bridge the digital divide.

Space is the future for  
communications on Earth.

# Connect with OneWeb

OneWeb and our Distribution Partners collaborate to build, flex, and scale customer-focused enterprise solutions. Together we enable a fiber-like connectivity experience for everyone, everywhere.

## ISAT AFRICA offers

- Enterprise Connectivity
- Rural Solutions
- Broadcasting Solutions
- Cellular Backhaul
